What is the market cap of all cryptocurrencies

Why do all cryptocurrencies rise and fall together

## Cryptocurrencies all

Each of our coin data pages has a graph that shows both the current and historic price information for the coin or token. Normally, the graph starts at the launch of the asset, but it is possible to select specific to and from dates to customize the chart to your own needs online casino paysafecard. These charts and their information are free to visitors of our website. The most experienced and professional traders often choose to use the best crypto API on the market. Our API enables millions of calls to track current prices and to also investigate historic prices and is used by some of the largest crypto exchanges and financial institutions in the world. CoinMarketCap also provides data about the most successful traders for you to monitor. We also provide data about the latest trending cryptos and trending DEX pairs.

Yes! It is completely legal to use cryptocurrency such as Bitcoin. Individuals are allowed to use which currency they want as long as both parties agree on the same means of payment. However, there are countries that have indirectly or partially prohibited cryptocurrency. The reason for this varies, but generally, the government wants more control over the financial market. Here is a list of all countries' laws about Bitcoin.

The fees become more important, the more cryptocurrency you exchange. The lowest fees can be found at exchanges with high volume order books. To get the lowest fee you should buy/sell with a limit order.

## What is the market cap of all cryptocurrencies

In order to send and receive a cryptocurrency, you need a cryptocurrency wallet. A cryptocurrency wallet is software that manages private and public keys. In the case of Bitcoin, as long as you control the private key necessary to transact with your BTC, you can send your BTC to anyone in the world for any reason.

Play-to-earn (P2E) games, also known as GameFi, has emerged as an extremely popular category in the crypto space. It combines non-fungible tokens (NFT), in-game crypto tokens, decentralized finance (DeFi) elements and sometimes even metaverse applications. Players have an opportunity to generate revenue by giving their time (and sometimes capital) and playing these games.

Cryptocurrency works through networks of nodes that are constantly communicating with each other to stay updated about the current state of the ledger. With permissionless cryptocurrencies, a node can be operated by anyone, provided they have the necessary technical knowledge, computer hardware and bandwidth.

At the time of writing, we estimate that there are more than 2 million pairs being traded, made up of coins, tokens and projects in the global coin market. As mentioned above, we have a due diligence process that we apply to new coins before they are listed. This process controls how many of the cryptocurrencies from the global market are represented on our site.

For smaller alternative cryptocurrencies or altcoins, there can be noticeable price discrepancies across different exchanges. At CoinCodex, we weigh the price data by volume so that the most active markets have the biggest influence on the prices we're displaying.

## Why do all cryptocurrencies rise and fall together

Although the barrier of entry is relatively low and many cryptos fail to take off, any newly introduced cryptocurrency can gain momentum, resulting in the value of other coins going down while the newcomer's token gains value.

In other words, if you're asking yourself, "Why is crypto going up," it is because an increasing number of people have a positive market perception of it. A famous example occurred in November 2021, after the launch of the first Bitcoin exchange-traded fund. This event caused Bitcoin to reach its all-time high of \$65,000.

Cryptocurrencies, especially Bitcoin, have shown a correlation with traditional markets like the S&P 500. These markets are influenced by macroeconomic factors such as inflation rates, GDP growth, and unemployment rates. Therefore, when these factors affect traditional markets, they also impact the cryptocurrency market, leading to a coordinated movement.

Cryptocurrency prices are notorious for their wild swings, leaving investors and enthusiasts alike scratching their heads. The question that often

perplexes newcomers and traders alike is: what causes cryptocurrency prices to rise and fall?
